

300Mbps 802.11n Wireless Broadband Router

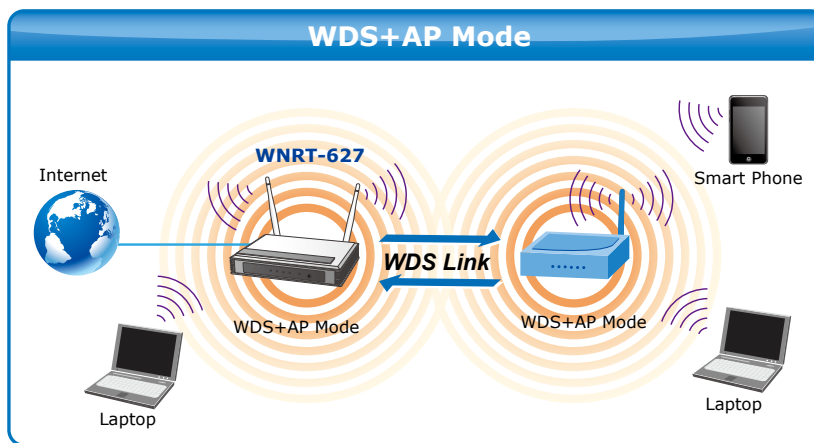

Ultra High Speed 802.11n Wireless

The WNRT-627 features latest IEEE 802.11n radio with 2T2R MIMO antenna technology to provide improved wireless speed and coverage with up to 300Mbps upload and download data rate. The incredible wireless speed makes it ideal for handling multiple HD movies stream, high resolution on-line game, stereo music, VoIP and data streams at the same time stably and smoothly. It is also backward compliant with 802.11g and 802.11b standards; thus it is no need to change the existing network for maintaining connectivity. Just connect to the WNRT-627, you can immediately enjoy the high-speed wireless sharing.

Wireless Coverage Plus !

With two **5dBi high-gain antennas** attached, the WNRT-627 provides stronger signal quality and more excellent performance than normal wireless routers especially when in the long range or poor environment condition for further wireless coverage range. Besides essential wireless sharing for Wi-Fi clients, the WNRT-627 provides **WDS (Wireless Distribution System)** bridge mode to facilitate wireless network deployments and range expanding. It provides more flexibility for users while establishing wireless network.

Wide Range of Wireless Security Support

To secure the wireless communication, the WNRT-627 supports not only 64/128/152-Bits WEP, but also up-to-date encryptions including WPA/WPA2-PSK with TKIP/AES, wireless MAC filtering and SSID broadcast control to consolidate the wireless network security and prevent unauthorized wireless connection.

Easy Secure Wireless Connection

In order to simplify security settings for home and SOHO network, the WNRT-627 supports **Wi-Fi Protected Setup (WPS)** with configuration in PBC and PIN type. By just push the WPS button or key in the PIN code, the secure connection between the WNRT-627 and wireless clients will be built immediately, which offers a convenient and fast method for users.

WPS (Wi-Fi Protected Setup) Quick & Easy Wireless connection

Advanced Firewall Security

To protect user's network from external attacks, the WNRT-627 provides dual firewall mechanisms – **NAT** and **SPI**. The NAT function allows multiple users to access to Internet via a single legal IP, and the SPI (Stateful Packet Inspection) firewall protects intranet PCs from unauthorized access and prevents possible DoS attacks from the Internet. In the aspect of firewall, the WNRT-627 supplies flexible **IP-Based Access Control**, **schedulable MAC access control** and URL block to prevent possible hackers attack.

Full Functioned Router

As a robust broadband router, the WNRT-627 supports various Internet connection protocols and auto detect function to establish Internet service when the ISPs use different connection type. It also provides Virtual Server and DMZ functions for LAN PC to act as an application server and offer certain service to the clients in the LAN. The WNRT-627 allows users to setup trigger ports of special applications and utilize Internet services smoothly. Moreover, **IP-Based bandwidth control** optimizes time-critical applications such as VoIP or video conference not to be interrupted or lagged due to P2P files download by other clients in the same network environment.

Easy to Setup

Users can easily configure the wireless router by running the Smart Setup! wizard included in the CD-ROM provided in the package. Just click the wizard and setup step by step, you can easily get in the wireless network and enjoy high speed Internet transmission in home or office.
